## **5. Forms and formats of reports, provided by the Clearing House to Clearing Members and Trading Members**

Reporting documents are generated in the Clearing System in accordance with Clearing Rules and provided to Clearing Members in form of electronic documents of category «B».

These electronic documents are the documents generated in accordance with requirements of XML language version 1.0.

Name structure of XML-file with reporting document has the following form: FFFFFFFF\_TTTTT\_SSS\_DDMMYY\_NNNNNNNNN.RRR, where:

- FFFFFFFF – the first 7 symbols of the destination organization ID (or MM00001 for electronic documents intended for all organizations, for example, for on-exchange information);
- TTTTT – type of the electronic document, including 3 symbols of the market ID (for example «EQM06» for the Extract from the list of trades, accepted for clearing or «EQM6C» for the Extract from the list of trades, accepted for clearing (clients' trades) etc.);
- SSS – technical ID of the report generation procedure;
- DDMMYY – date for which the reporting document is generated;
- NNNNNNNNN – unique number of the electronic document in NCC's EDI Subsystem;
- RRR = xml.p7s.zip.p7e - composite file extension, containing from the chain of extensions, meaning the sequence of actions for decrypting (p7e), unzipping (zip) and removing digital signature (p7s) necessary to receive the initial XML-file.

Full specification of XML language version 1.0 is given in the document Extensible Markup Language (XML) 1.0 (Second Edition), developed by W3C and published in Internet on the web-site <http://www.w3.org/TR/REC-xml>.

Each electronic document contains the title in form of text lines and context part, which is lines with the data.

Each line with the data is sequence of the fields separated by the tab symbol (hexadecimal code 09). The lines must end with the combination of symbols «carriage return – line feed» (hexadecimal codes 0D,0A).

The reporting document in XML format can be converted into any format convenient for the recipient (including TXT format with separators) by processing with own back-office software and/or standard software (MS Excel).

The reporting document in XML format can be converted into printed form by opening in Microsoft Internet Explorer.
